

WIRELESS DATA BACKUP

# Remain operational if your primary network connection fails

Network connectivity is critical for every business today. Whether you have multiple locations, retail stores, ATMs or point-of-sale applications, lost connectivity means lost revenue. Maintaining network connectivity is essential to your daily operations, and your bottom line.

## Ensure 100% uptime for your mission-critical network

Wireless failover solutions from Windstream Enterprise enable you to stay connected in the event of a network outage. Coupled with our 4G service, we provide secure and reliable, multi-carrier protection against the disruption of network services.

Our 4G routers constantly communicate with your primary connection. Should your connection fail, our 4G router automatically initiates a cellular connection and fails back when the primary connection is restored.

### Features

SD-WAN, MPLS and Internet backup support

4G LTE data speeds

Automatic failover in the event of a service interruption

BGP routing protocol for outbound and inbound IP traffic

Fully managed solution

### Benefits

Eliminates downtime when service interruptions occur

Provides business continuity with true diversity

Lowers monthly recurring costs

Enables a positive customer experience

Maintains employee productivity
